Provide a Smarter Patient Care System for Hospitals

The innovative 300B Smart Patient Safety Care System utilizes Bluetooth Gateways to establish a hospital-wide safety network. The instant SOS calling button ensures safer and more immediate patient care, while built-in features like RRI, HRV, and other key physiological data enable nurses and doctors to provide more precise and professional medical care services. Our ultimate goal is to enhance family safety, improve nursing efficiency, empower smarter decision-making for doctors, and personalize long-term care.
